

INFORMATION SHEET

CORNER-FITTED HDPE SUN SAILS

We sew our sun sails using a very strong HDPE material of 285g/m² grammage. Owing to this special material, the sails provide 95% shade and are available in gray and sandy colours. If they are suspended at an angle, some water will be drained out, and excess water will be let through so you will be able to enjoy almost maintenance-free use.

The features of the material, thought-out solutions and neat finish make them suitable for almost any place, using the existing infrastructure, especially since there are lots of options for their finish. The sun sails are particularly valued for their functionality with low purchase costs, stylish look, easy use, possibility of making products with surfaces of even 30m², versatility, easy installation which can be performed in a manner that is non-invasive for the structure. Due to the undemanding use, they are recommended especially for public spaces, as well as in large areas to be shaded.

Note! When choosing a product, please read the instructions for use.
