

INFORMATION SHEET

MESH RETRACTABLE SUN SAILS

The sun sails are made of factory white mesh of 270g/m² grammage which gives approx. 60% shade. Since the fabric is perforated, water flows through it like through a sieve, which facilitates its use. 60% shade is sufficient for a place of feasting. If the site of planned installation is intended for resting in a lying or reclining position on a deckchair, reading a book, working on a computer, 60% may turn out to be insufficient*, because some of the sunlight will reach the eye.

*The customer needs to consider decor or HDPE material then.

The material used allowed for obtaining a cost-effective product, and sun sails made of it are an alternative option to expensive and complex solutions. With the thought-out solutions and neat finish, they can be retracted and extended, without using any expensive solutions. They are going to decorate every construction. Customers choose them in situations when there is no need for rain protection, often under polycarbonate or glass roofs and in places exposed to dirt where washing with pressure washers is an additional advantage. They are a valued choice for their versatility, functionality along with low purchase costs, easy use, easy installation, which can be performed in a way non-invasive for the structure.

Note! When choosing a product, please read the instructions for use.
