

INFORMATION SHEET

GAZEBO AND ROMAN SUN STRIPS OF HDPE MATERIAL

We sew our strips using a very strong HDPE material of 285g/m² grammage. Owing to this special fabric, the strips provide 95% shade and are available in gray and sandy colours. If they are suspended at an angle, some water will be drained out, and excess water will be let through so you will be able to enjoy almost maintenance-free use.

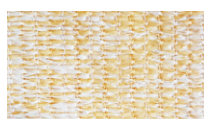

Gazebo strips, using transverse beams on the structure, decorate it perfectly, while highlighting the beauty of the gazebo itself. They are a valued choice for their functionality along with low purchase costs, stylish look, very easy use and installation, which can also be performed in a way non-invasive for the structure.

Note! When choosing a product, please read the instructions for use.
